

# DGP influence of x2 on x3

**Black: COLR, Red: Our Model**

**$h_I(X_2)$  Black: COLR, Red: Our Model**

$h_l(X_3)$  Polr (blue) our Model (red)

**Black = Observations, Red samples from TRAM-DAG**

**X1 red: ours, black: data**

**X2 red: ours, black: data**

**Do( $X_1=0.2$ )  $X_2$**

samples  
Histogram from DGP with do. Blue: Colr

**X2 | Do(X1=0.2)**

samples  
Histogram from DGP with do. red:TRAM\_DAG

**X3 | do(X1=0.2)**

X3  
Black DGP with do. red:TRAM\_DAG

**X2 | Do(X1=0.7)**

samples  
Histogram from DGP with do. red:TRAM\_DAG

**LS-Term (black DGP, red Ours)**

**LS-Term (black DGP, red Ours)**

**CS-Term (black DGP  $f_2(x)$ , red Ours)**
